

# Qlik® DataMarket Connector for QlikView 2.0 – Release notes

The Qlik DataMarket Connector for QlikView installs from the executable file—QlikDataMarketConnector\_setup.exe. Installation instructions are available on the [Qlik Connectors help site](#).

The Qlik help site for connectors provides full documentation for the [Qlik DataMarket Connector for QlikView](#).

The DataMarket Connector for Qlik Sense is built into Qlik Sense and does not require a separate installation.

## What's new in this release?

---

- Qlik DataMarket data sets are loaded in multiple tables with automatically generated key fields to connect the tables. All tables from a single data set are associated through the measures table.
- A search facility that enables users to locate data by searching on terms or phrases rather than browsing data packages and data sets.
- Unlicensed data sets display a **Purchase** label that links directly to the **Qlik** web site for purchasing the additional license required for the data set.
- Qlik DataMarket Connection dialog displays the status of all DataMarket licenses currently installed.

## Bug fixes for this release

---

The Qlik DataMarket Connector for QlikView comes with fixes to the issues described below.

### Selecting all Global Weather produces load failure error

Jira issue ID: DS-1272

When all filters are selected in **Global Weather > Weather for more than 2500 cities worldwide** and **Global Currencies > 162 x 162 currency exchange rates**, a “Custom read Failed” error occurs.

## Known issues and limitations

---

No known issues or limitations have been identified at release time.
