

Qlik® Salesforce Connector 14.1 – Release notes, revision 307

Bug fixes for this revision

Qlik Salesforce Connector 14.1 revision 307 comes with the fix for the issue described below.

- When selecting the QueryAll option for the SOAP API interface type, the query would not return deleted or archived records. Instead, the query would return results as if the Query option was selected.
- Relationship query with a polymorphic key (keywords TYPEOF, Owner, Who and What) returned an error indicating the query is not supported by the connector. Relationship queries with a polymorphic key worked in earlier versions.

Known issues and limitations

The following issues and limitations were identified at release time. The list is not comprehensive; it does however list all known major issues and limitations. The ambition is to have the issues fixed in coming versions.

- The Number of Threads field for the Bulk API Interface type only works when PK Chunking is selected. Changing the thread count will not have an effect on running normal Bulk mode.
